Report on Soft Skills Development (ICT) on 22nd October 2022

The College had conducted Soft Skill Development programme on ICT on the theme of "Use of AI tools for writing legal articles" on **22nd October 2022**. Artificial Intelligence (AI) has made significant contributions to various fields, including research and writing. AI can be a valuable tool in writing legal articles, offering various benefits to legal professionals and writers. AI can assist in drafting articles by suggesting language based on the context and legal precedents. This can help improve the overall quality and efficiency of the writing process.

The Fifth programme was conducted by Asst. Prof. Saurabh Pagare, IT expert and professor. He delivered lecture on the different perspectives of AI tools used in writing articles based on legal topics. AI tools can process large datasets to identify trends, patterns, and correlations within legal cases and regulations. This data-driven approach can add depth and insight to legal articles. AI can be used to predict legal outcomes based on historical data and case law. This predictive analysis can be valuable when discussing potential legal implications or trends in legal articles.

The speaker of the session well explained about AI-powered collaboration tools can facilitate communication among legal professionals and writers, streamlining the editing and review process. AI-driven Chatbot's can be employed to answer common legal questions, engage with readers, and provide additional resources, enhancing the interactivity and user experience of legal articles. Some AI tools are specifically designed for legal writing, offering recommendations for using more precise legal terminology and adhering to specific legal writing conventions. AI can assist in managing citations by automatically formatting them according to the required citation style. This can help you avoid common citation errors and ensure consistency.

Outcome-

AI tools can help writers ensure the originality of their content by detecting and flagging potential instances of plagiarism. AI can analyse reader preferences and behaviour to recommend personalized content, making legal articles more engaging and relevant to a specific audience. While AI can significantly enhance the efficiency and effectiveness of legal writing, it's important for legal professionals to exercise caution and maintain human oversight, especially in matters requiring nuanced legal interpretation and ethical considerations. AI should be seen as a complementary tool, aiding legal writers in their research and drafting processes.

Dr. (Mrs.) Madhura Kalamkar
