Report on Soft Skills Development (ICT) on 21st October 2022

The College had conducted Soft Skill Development programme on ICT on the theme of "Use of AI tools for writing research paper" on **21st October 2022**. Artificial Intelligence (AI) has made significant contributions to various fields, including research and writing. In the context of writing research articles, AI can be utilized in several ways to streamline processes, enhance efficiency, and improve the overall quality of content. AI can be a valuable tool in various stages of writing a legal research paper, offering assistance in research, drafting, and even proofreading.

The Fourth programme was conducted by Asst. Prof. Saurabh Pagare, IT expert and professor. He delivered lecture on the different dimensional aspects of AI tools used in writing research paper. AI-powered legal research tools can help you quickly and efficiently gather relevant cases, statutes, and regulations. These tools use natural language processing to understand your queries and provide accurate results. AI can enhance the search capabilities of legal databases, making it easier to find relevant cases, statutes, and legal articles based on specific keywords or topics.

The speaker of the session well explained about AI-powered writing assistants can help improve the overall quality of your legal writing by checking for grammar, spelling, and style errors. They can also provide suggestions for better phrasing. Some AI tools are specifically designed for legal writing, offering recommendations for using more precise legal terminology and adhering to specific legal writing conventions. AI can assist in managing citations by automatically formatting them according to the required citation style. This can help you avoid common citation errors and ensure consistency.

Outcome-

AI tools can analyse legal data to identify trends, predict case outcomes, or provide insights into legal issues. This can be useful for supporting arguments in your research paper. AI-driven collaboration tools can facilitate teamwork on a research paper by allowing multiple authors to work simultaneously, tracking changes, and suggesting edits. Some AI tools can analyse research paper from the perspective of a peer reviewer, providing insights into potential weaknesses, inconsistencies, or areas for improvement. AI can help identify and mitigate potential biases in writing, ensuring that legal research paper is objective and fair.
